## Social Enterprise of the Month

### Mid Sussex Wood Recycling Project

Mid Sussex Wood Recycling Project was formed in 2007 to re-use and recycle some of the thousands of tonnes of wood going to landfill locally by collecting wood waste from local businesses. We can dispose of timber waste in an environmentally beneficial way that is 30-40% cheaper than traditional methods.

We are a Social Enterprise; a not-for-profit environmental group and financially self-supporting.

The project provides a disposal route for timber waste in a number of ways.

- Timber packaging waste is processed into wood chip for use as composting.
- Pallets in good condition are sorted and re-enter the logistics supply chain.
- Useable timber is processed into wood products or re-sold cheaply to the community for DIY projects.

Our income is derived from the charges we make for our collection service and from sales of wood and wood products. Any surplus is reinvested in order that we can continue providing a vital environmental service to the Mid Sussex area.

We offer placements and training to young people or those seeking employment and we encourage volunteers interested in the Project and its aims to get involved.
